Product Sheet

Double Row Wing Grille

Grilles

Control the airflow precisely in your industrial ventilation systems with Novaclime double row wing grilles. Comfortable and efficient solutions!

SKU
CMN7KGEL

General Features

- Airflow direction and distribution
- Precise air control
- Horizontally and vertically adjustable wings
- Different color and material options
- Durable and long-lasting design

Installation Type

- Take the measurements of the area where the grille will be installed.
- Secure the mounting frame or fasteners.
- Place the grille in the frame or fasteners.
- Perform the necessary screwing or fastening operations.
- Adjust and test the airflow direction.

Surface Finish

- Standard powder coating
- Anodized coating
- Stainless steel
- Oven paint

Accessories

- Mounting frames
- Fasteners
- Airflow direction vanes
- Dampers
- Plenum boxes

Detailed Content

What is a Double Row Wing Grille?

Double row wing grilles are an important component used to direct and distribute airflow in industrial ventilation systems. These grilles are especially preferred in environments requiring precise air control. The wings arranged in two rows allow the airflow to be adjusted both horizontally and vertically. This feature helps to optimize air distribution and increase the level of comfort.

Advantages of Double Row Wing Grilles

The main advantages of double row wing grilles are:

• Precise Air Control: Airflow can be easily directed to the desired direction thanks to the two rows of wings.
• Flexible Air Distribution: Horizontal and vertical adjustment options provide air distribution suitable for different space needs.
• Comfortable Environment: Homogeneous distribution of airflow minimizes temperature differences, creating a comfortable environment.
• Aesthetic Design: It adapts to the design of the space with different color and material options.

Usage Areas of Double Row Wing Grilles

Double row wing grilles have a wide range of uses. The main usage areas are:

• Offices: Ideal for providing comfortable airflow in working environments.
• Shopping Centers: Provides homogeneous air distribution in large areas.
• Hospitals: Used in environments requiring hygienic and controlled airflow.
• Industrial Facilities: It is preferred to increase air quality and provide temperature control in production areas.

Novaclime Double Row Wing Grille Solutions

As Novaclime, we offer high-quality double row wing grille solutions for your industrial ventilation needs. Our products are manufactured from durable materials and provide long-lasting and reliable performance. You can contact us for grille solutions suitable for your needs.
