Novaclime

Product Sheet

Marine Anemostat

Diffusers

Durable and adjustable marine anemostats for ships and maritime applications. Control airflow, increase comfort. Novaclime quality.

SKU
CMN7JPTE

General Features

- Design resistant to marine conditions
- Adjustable air flow
- Corrosion resistant materials
- Easy installation
- Long lasting use

Installation Type

- Clean the surface to be installed.
- Place the anemostat in the appropriate position.
- Secure using fixing screws or clamps.
- Adjust the air flow.
- If necessary, ensure tightness by using additional gaskets.

Surface Finish

- Painted
- Galvanized
- Stainless Steel

Accessories

- Installation parts
- Control accessories
- Connection elements

Detailed Content

What is a Marine Anemostat?

Marine anemostats are a special ventilation element used especially in ships and maritime applications. These anemostats are designed to control and direct airflow. Thanks to their durable structure and materials suitable for marine conditions, they offer a long-lasting and reliable solution. Marine anemostats can be used in different areas within the ship, for example, in cabins, lounges and engine rooms.

Advantages of Marine Anemostats

Marine anemostats offer some important advantages compared to traditional anemostats. They are designed to withstand the harsh conditions of the marine environment. They are made of corrosion-resistant materials and are protected against the negative effects of salt water. In addition, marine anemostats usually have adjustable vanes, which allows the air flow to be easily directed in the desired direction. This feature increases the efficiency of the ventilation system inside the ship and creates a comfortable environment.

Marine Anemostat Usage Areas

Marine anemostats have a wide range of uses in the maritime sector. They can be used in many different types of ships, from passenger ships to cargo ships, from fishing boats to military ships. They are also preferred to meet ventilation needs in marine platforms and coastal facilities. Marine anemostats not only provide ventilation, but also improve the air quality inside the ship, creating a healthy and safe working environment.

Novaclime Marine Anemostat Solutions

As Novaclime, we offer high quality marine anemostats suitable for the special needs of the maritime sector. Our products are designed for durability, efficiency and long-lasting use. We have marine anemostat options in different sizes and features. You can contact us to find the most suitable solution for your needs.
